By subscribing to IHIE’s ADT Alert solution, you will know when patients under your care are admitted, discharged, or transferred to other healthcare facilities. Equips your team to make timely, informed, and caring outreach calls to patients, and to schedule them for continuity of their care.

**How It Works**

1. When a patient is admitted, discharged, or transferred to a hospital system or emergency department, an automatic message is sent to IHIE.
2. IHIE’s cutting edge technology translates this information into an alert message that is automatically sent to the primary care provider to intervene, coordinate care, and plan follow-ups.
3. The alert messages can be customized to best meet the preferences of the organization. Options include: as occurs, daily, weekly, or another setting that the provider chooses.

**Who Uses ADT Alerts?**

- Physicians
- Pop Health Care Managers
- Payers
- Analysts

An impactful way to manage and reduce healthcare expenses for any managed care organization.

**ADT ALERTS**

Help manage your patient population with clinical alert notifications
