

CCD TO EHR INTEGRATION

Get the specific data you want, when you want it.

CCD CONNECT

Indiana Health Information Exchange

Save time by accessing your patient's full story through our single source of data.

Your patient's healthcare records matter—and nearly everyone's experienced how frustrating it is when they don't follow you around. The Indiana Network for Patient Care, our clinical data repository, which contains more than 12 billion pieces of clinical data, acts as a single source of data for care providers. Through CCD Connect, we're able to provide a useful summary document of the patient's longitudinal health record that can be ingested within your EHR. Providers are able to make use of this valuable data without leaving their normal EHR workflow.

HOW IT WORKS

IHIE compiles a summary Continuity of Care Document (CCD) containing information from the INPC for the individual patient. This document is delivered to the requesting hospital or physician's EHR either via a direct push from IHIE or a query from the EHR.
