

PopDash

Use **BIG DATA** to assist managing the health of large populations.

Gather insights related to:

- Social Determinants of Health
- Quality Measures
- Increased Need for Real-Time Data
- Employer Wellness Program

PopDash is a population health platform fueled by IHIE's clinical data repository. Having an aggregated view of Indiana's data and clinical cohorts helps to address the tough pop health challenges:

- Which interventions lead to significant long-term improvement?
- Am I focusing on the right things with each patient?
- How do I maximize the value of both claims and clinical data?

Drill down into *population health data* with **IHIE's unique analytics dashboard**. Suitable for Care Managers in various settings: clinical, employer, payer, etc.

Indiana Health Information Exchange

The Indiana Health Information Exchange was founded in 2004 as a non-profit health information exchange that enables hospitals, physicians, laboratories, payers, and other health service providers to avoid redundancy and deliver faster, more efficient, higher quality healthcare to patients in Indiana. Today, by making information available to approximately 50,000 healthcare providers in Indiana and neighboring states, we deliver services that make a real difference in health and healthcare.
