

Indiana Health Information Exchange

The Indiana Health Information Exchange is Indiana's Health Data Utility (HDU), a statewide, mission-driven asset that provides a single, trusted source of patient information. IHIE delivers more than connectivity—it delivers competitive advantage, cost savings, security safeguards, and measurable impact on member health while helping shape the statewide healthcare environment.

IHIE is a partner for your organization, working side-by-side with your leadership and analytics teams to design solutions that meet your exact needs.

IHIE provides strategic value to payors:

One Complete Picture of Health

Gain a full picture of member health, integrating data from hospitals, providers, labs, pharmacies, and public health agencies across Indiana, regardless of EHR platform. Streamlined, statewide data connections reduce complexity, eliminate redundancies, and **improve accuracy in claims and care management.**

Cost Savings + Increased Efficiencies

Helps payors and providers **avoid unnecessary spending** by reducing duplicative testing, reducing inefficiencies and minimizing compliance risk. In addition, IHIE translates thousands of clinical and claims data into a unified, trusted record, **providing payors with real-time, actionable intelligence.**

Connects All Hoosiers—Urban + Rural, Privately Insured + Medicaid Recipients

Ensures that health plans have visibility across all Hoosiers from urban and rural to privately insured and Medicaid recipients. This creates accurate and equitable reporting, strengthens population health insights, and supports Indiana's Medicaid program by **integrating both clinical and claims data to improve outcomes and reduce costs.**
